21 MS. WRIGHT: Deanna Wright, D-E-A-N-N-A,
22 W-R-I-G-H-T.

550650

23 Please do not endanger our families. You,
24 the U.S. government, thought that the Nevada test site
25 was safe. Put families out there to live and only now

0048

1 decades later do we know and you admit that the whole
2 project was far more dangerous than was ever thought to
3 be. Not only does the movement process of the waste
4 worry me tremendously, I worry about the things, the
5 natural elements, the processes, the people, and the
6 countless other problems that can and will go wrong.
7 What about all the information we don't know that we
8 could find out in 25, 50 or 100 years from now? Please
9 do not put Nevada's people at high risk again. Find
10 another state to do its part in this nuclear age. Why
11 ship this dangerous waste cross-country? Find
12 somewhere closer to its home for this waste to be
13 stored. There are countless reasons why this is not
14 the best or only solution. I also find it very
15 disturbing that only Yucca Mountain is being studied.
16 Why? Why not do more than one study at a time so that
17 those precious years are not lost if the top priority
18 site is found unsuitable? And then I put -- no, no, no
19 waste at Yucca Mountain.
